

Java Collections

Why use static-size arrays. When you have collections...

Collection Interface

Collection Interface

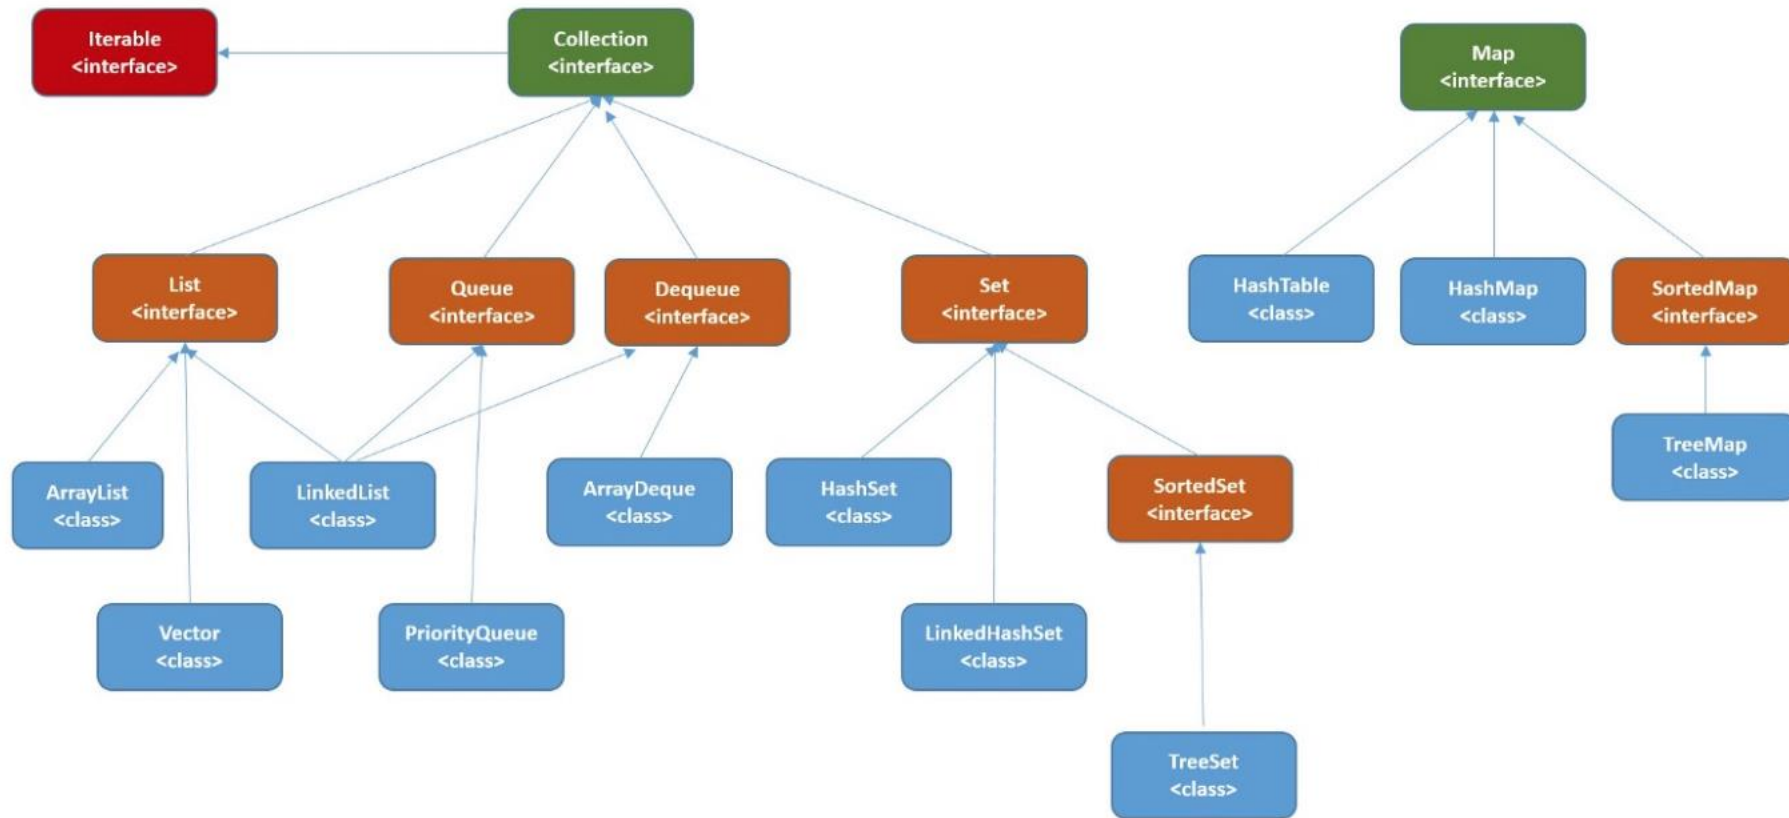

Compile?

- `Collection<int> collectionOfIntegers = new Collection<>();` ? →
- NO, Collection is an interface, the, it can not be instantiated (it does not work)
- `List<int> integers = new List<>();` ? →
- NO (List is an interface)
- `ArrayList<int> integers = new ArrayList<>();` ? →
- OK
- `ArrayList<Object> objects = new ArrayList<>();` ?

Collection Framework Hierarchy

When to use them

Code snippet

Collection things;

things = new ArrayList();

System.out.println("size at the beginning: " + things.size());

things.add(18000);

things.add("hello Quito");

things.add(5000.25F);

things.add(person);

things.remove(5000.25F);

Code snippet

```
Collection<Integer> integers = new ArrayList<>();  
integers.add(1);
```

```
Collection<Person> persons;  
persons = new ArrayList<>();
```

```
for (int i = 0 ; i < 5 ; i++ ) {  
    persons.add(new Person(i+1, "Edison"+(i+1),(i+1)*1000));  
}
```

```
persons.forEach((p) -> {  
    System.out.println("Person --> " + p);  
});
```

More code

```
public static void main(String[] args) {
    ArrayList<Book> books;
    int sizeBooks;
    books = new ArrayList<>();

    //initializing the elements
    for(int i=0; i<10;i++){
        books.add(i, new Book("title"+i, "Author"+i, "Editorial"+i, "2022"));
    }
    sizeBooks= books.size();

    //printing the elements
    for(Book book: books){
        System.out.println(book);
    }

    System.out.println("Quantity of book"+sizeBooks);
}
```
