Setters getters

setters

private -> no other object can access that content

This information is encapsulated

We have to access this information through public methods

Setter method will allow to modify attributes values.

```
class Person{
    private int name;
    public void setName(String name){
        this.name = name;
    }
}
```

getters

▶ Public methods that will allow to get the information from an object attribute

```
class Person{
    private int name
    public int getName(){
        return name;
    }
}
```
